Bleeding Control | Bleed Control Kits

This kit includes the patented RapidStop® Tourniquet which represents a hemostatic trauma solution with military-grade ruggedness, all age suitability, superior single-handed application and the fastest average occlusion time. A severed brachial, radial, or ulnar artery, presents a limited window of time before the decreasing blood pressure renders the injured unconscious. Shock can set in even sooner. Achieving full occlusion in the shortest time possible is critical. Faster application means faster stabilization, increasing chances of survival. Durable weatherproof plastic case included.

Item: Bleed Control Kit
Level: Standard
Code: RSK500

Item: Bleed Control Kit
Level: Advanced
Code: RSK501

Item: Bleed Control Kit
Level: Professional
Code: RSK502
