

VIP HEADREST

VENTILATION, INTUBATION, PROCEDURES

The VIP Headrest is a multi-function foam headrest designed by an Anesthesiologist to address a fundamental gap in airway management and patient positioning. The VIP Headrest functions as a complete positioning system, prioritizing both a stable head cradle for procedures and airway-optimization for ventilation and intubation.

PRODUCT DIFFERENTIATORS

Procedural Mode

Cradle Support

- Stabilizes the occiput
- Prevents lateral movement
- Distributes pressure evenly

Ordering Information:

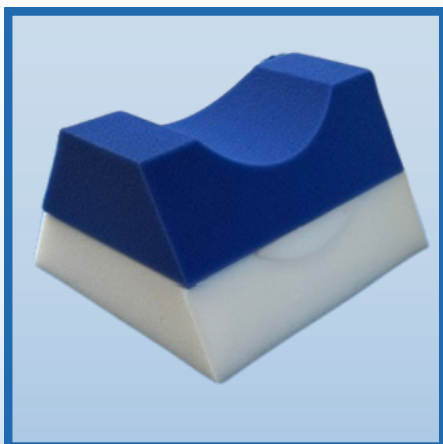

Each - BDF-VIP

Case of 5 - BDF-VIP-5

Airway Mode

Elevation & Alignment

- Promotes head elevation and neck extension “sniff-position”
- Improves airway spontaneous ventilation during deep sedation
- Enhances mask ventilation
- Improves laryngoscopic view during intubation for both direct and video laryngoscopy

“Not just a headrest
- an airway adjunct
built into a
disposable
positioning device”
