SC003	Neuro disposable blades
SC004	Rechargeable Surgical Clipper (only)
SC006	Charging Station and plug (only)

SWISS DESIGN + DEVELOPMENT

ME Medical

Surgical Clipper

The world's most innovative surgical clipper with a unique twist

ME Medical

Surgical Clipper preferred by medical practitioners worldwide for its superior performance and safety

Easy to clean and disinfect.

Water resistant for complete submersible cleaning.

ME Clipper's revolutionary head twists 45 degrees to contour to even the most difficult-to-reach areas.

Easy, no touch insertion and ejection of disposable clipper blades.

Easy-to-hold non-slip grip handle provides the necessary control for complete hair removal without injury.

Rechargeable lithium battery fully charges in just one hour with long-lasting use. Includes charging station for table or wall mounting. Also features a battery status indicator, and overcharge protection.

Two types of disposable clipper blades: the *Universal* designed for most hair and clipping needs, and the *Neuro* for coarse or dense hair. Both ensure a smooth sliding motion, while preventing direct skin contact. Greatly reduces the risk of painful cuts, micro injuries, skin irritation and infection.

Easy to Use **Recommended Procedure**

1. **Insert disposable clipper blade**
   Easily peel the paper from the disposable clipper blade package. Hold the clipper handle and slide it into place until an audible snap is heard, indicating the blade is securely attached.

2. **Cutting Hair**
   Hold the handle of the surgical clipper like a pen, with the ME logo on top. Stretch the skin, put the clipper blade flat on the skin and run it against the direction of hair growth.

3. **Remove the clipper blade**
   Turn off the surgical clipper, hold it pointing down over a Sharp's container and press the eject button located directly under the blade head. Always use a new clipper blade to prevent cross-contamination.

4. **Clean the handle of the surgical clipper**
   Wash the handle of the surgical clipper by submerging it in water or thoroughly rinsing. Completely dry and then wipe the handle with a surface disinfectant or disinfectant towel.

5. **Charging and storing**
   Set the surgical clipper upright in the charger, so it will be fully charged for next use.

Most cost-effective surgical clipper on the market.

2 Year Warranty
